

step 1: a closer look.

We will meet at your facility and at your convenience to conduct a waste audit. The entire process takes about 30 minutes. Larger facilities take longer. During the waste audit process, our trained, professional staff will ask a series of questions about your operations and existing waste handling practices.

step 2: dive in!

We will examine the waste inside your dumpsters to discover the various types of waste you generate. In some cases, we will actually sort and weigh waste using a series of bins and containers to get detailed information about your waste generation rates.

step 3: let's talk trash!

Using the information from the waste audit, we will develop a written plan that is perfect for your business. Plus, we will provide you with options to ensure you get the most cost effective program.
